Reading Questions for Chapter 3 and Beyond

1. Outline the section. Include key definitions, main results, and other significant ideas.
2. Look at each example. What is it an example of? What is the point of the example?
3. To understand a definition or a theorem, try making up an example yourself.
4. What are the over-arching themes or ideas? Meta-points?
5. What struck you? What is unclear to you in this reading? What questions do you have?

You do not have to answer all of these questions in detail for every reading assignment. The questions are meant to be a guide for you as you read and take notes.

However, please do answer the last question each time, and set it apart from the rest of your notes so that I can easily find your questions/reflections.
